

Respirator filter change out schedule for air purifing respirators used during spray foam operations

Our spray foam operation requires the use of Isocyanates and resins. As per industry standards and the American Chemistry Council, filters used in the vacinity of the spray operation will be P100/OV, and will be changed out every 8 hours. These air purifing respirators may be used 25 feet or more from the sprayer. The employee that is spraying the foam is required to wear a supplied air respirator.
