

The beauty of freedomRail is enhanced with the introduction of real wood veneers available in Espresso and Light Oak. The veneers are a thin layer of real wood applied to a composite wood interior, which allows home buyers to experience the depth and luster of real wood combined with the true adjustability of freedomRail.

Pleasing to the eye and touch, Espresso and Light Oak create an inviting and warm ambience for home buyers who desire the timeless quality of real wood. These touchable finishes present a look that compliments fine furniture and cabinetry styles in homes today.
